CONTENTS OF VOLUME 168

NUMBER 1, JANUARY 1988

A Method for the Determination of Inorganic Phosphate in the Presence of Labile Organic Phosphate and High Concentrations of Protein: Application to Lens ATPases *S. Chifflet, A. Torriglia, R. Chiesa, and S. Tolosa* 1

Applications of Tandem Microbore Liquid Chromatography and Sodium Dodecyl Sulfate–Polyacrylamide Gel Electrophoresis/Electroblotting in Microsequence Analysis *Sylvia Yuen, Michael W. Hunkapiller, Kenneth J. Wilson, and Pau M. Yuan* 5

Simultaneous Extraction from Clinical Biopsies of High-Molecular-Weight DNA and RNA: Comparative Characterization by Biotinylated and ^{32}P-Labeled Probes on Southern and Northern Blots *V. T.-W. Chan, K. A. Fleming, and J. O'D. McGee* 16

Purification of *Escherichia coli* Alkaline Phosphatase on an Ion-Exchange High-Performance Liquid Chromatographic Column Using Carboxymethyl Dextrans *Bruce E. Dunn, Stephen C. Edberg, and Anthony R. Torres* 25

Heme Oxygenase Activity as Measured by Carbon Monoxide Production *Hendrik J. Vreman and David K. Stevenson* 31

N-(3-(*p*-Azido-*m*-[^{125}I]iodophenyl)propionyl)-succinimide—A Heterobifunctional Reagent for the Synthesis of Radioactive Photoaffinity Ligands: Synthesis of a Carrier-free ^{125}I-Labeled Cardiac Glycoside Photoaffinity Label *Joseph M. Lowndes, Mabel Hokin-Neaverson, and Arnold E. Ruoho* 39

Preparative Elution of Proteins Blotted to Immobilon Membranes *Boguslaw Szewczyk and Donald F. Summers* 48

Analysis of Oligosaccharides from Heparin by Reversed-Phase Ion-Pairing High-Performance Liquid Chromatography *Yuchuan Guo and H. Edward Conrad* 54

Anion-Exchange High-Performance Liquid Chromatographic Analysis of Inositol Phosphates *W. Rodney Mathews, David M. Guido, and Rita M. Huff* 63

An Improved Method of Purification of Transforming Growth Factor, Type β from Platelets *James L. Cone, Dennis R. Brown, and Joseph E. DeLarco* 71

High-Performance Immobilized Metal Ion Affinity Chromatography of Peptides: Analytical Separation of Biologically Active Synthetic Peptides *Yasuo Nakagawa, Tai-Tung Yip, Makonnen Belew, and Jerker Porath* 75

Electrophoresis and Electroblotting of Native Collagens *John A. M. Ramshaw and Jerome A. Werkmeister* 82

H_2O_2 as a DNA Fragmenting Agent in the Alkaline Elution Interstrand Crosslinking and DNA–Protein Crosslinking Assays *Leszek Szmigiero and Kazimierz Studzian* 88

A Radioisotopic Assay of Picomolar Concentrations of Coenzyme A in Liver Tissue *Kathleen M. Knights and Roger Drew* 94

Radioreceptor Assay for Atrial Natriuretic Factor *Jolanta Gutkowska, France Carrier, Jean St-Louis, Gaétan Thibault, Marc Cantin, and Jacques Genest* 100

A Photodetection Device for Luminol-Based Immunodot and Western Blotting Assays *Merlin M. L. Leong, Glyn R. Fox, and John S. Hayward* 107

Fast Atom Bombardment–Mass Spectrometry of Glycosphingolipids Extracted from Thin-Layer Chromatography Plates *Peter Påhlsson and Bo Nilsson* 115

Light Scattering Measurements of the Gels of Gelatin and Acto Heavy Meromyosin Solutions by Sample Rotation Method
Syoyu Kobayasi, Hiroshi Kondo, and Mitsumasa Okamoto 121
Liquid Chromatographic Determination of Penicillins by Postcolumn Alkaline Degradation Using a Hollow-Fiber Membrane Reactor
Jun Haginaka and Junko Wakai 132
A Simple Apparatus for Controlling Nucleation and Size in Protein Crystal Growth
Kim M. Gernert, Robert Smith, and Daniel C. Carter 141
Evaluation of the Binding of *Acanthamoeba* Profilin to Pyrene-Labeled Actin by Fluorescence Enhancement *Sara Lee, Min Li, and Thomas D. Pollard* 148
Purification of *Xenopus* Transcription Factor IIIA and 5 S RNA from 7 S Ribonucleoprotein Particle by Ammonium Sulfate Precipitation
Zhigang Shang, William T. Windsor, You-Di Liao, and Cheng-Wen Wu 156
Continuous-Flow Fast Atom Bombardment–Mass Spectrometry of Permethylated Oligosaccharides: A Comparative Study of Direct Mixture Analysis with Packed Capillary Column Liquid Chromatography–Fast Atom Bombardment–Mass Spectrometry
Patrick Boulenguer, Yves Leroy, Josefa Maria Alonso, Jean Montreuil, Guy Ricart, Collin Colbert, Dirk Duquet, Chris Dewaele, and Bernard Fournet 164
Comprehensive Analysis of Collagen Metabolism *in Vitro* Using [4^3H]/[^{14}C]Proline Dual-Labeling and Polyacrylamide Gel Electrophoresis
John F. Bateman, Vince Harley, Danny Chan, and William G. Cole 171
A Nonisotopic Method for Determination of the *in Vivo* Activities of Tyrosine Hydroxylase in the Rat Adrenal Gland
Yasunori Hayashi, Soichi Miwa, Ken Lee, Kunio Koshimura, Atsuko Kamei, Keigo Hamahata, and Motohatsu Fujiwara 176
Silver Staining for Carboxymethylated Metallothioneins in Polyacrylamide Gels
Fuminori Otsuka, Shinji Koizumi, Masami Kimura, and Motoyasu Ohsawa 184
Analyses of Intramolecular Disulfide Bonds in Proteins by Polyacrylamide Gel Electrophoresis following Two-Step Alkylation
Masaaki Hirose, Nobuyuki Takahashi, Hideo Oe, and Etsushiro Doi 193
Factors Affecting the Rates at Which Nucleotides Bind to Dowex 1 Resin
W. Terry Jenkins and Lora A. Schweers 202
Chemical Modification as a Tool for Analysis of Messenger RNA Secondary Structure in Ribonucleoprotein Particles *Michelle F. Browner and Charles B. Lawrence* 206
Solid Phase Enzyme-Linked Competitive Binding Assay for Riboflavin
Geun Sig Cha and Mark E. Meyerhoff 216

Reactivity of Pyrimidine Nucleosides under the Conditions of the Pyrimidine Sequencing Reactions of Maxam and Gilbert
Jauh-Lin Duh, Rubio R. Punzalan, and Reynaldo C. Pless 231

A Simplified Lysis Method Allowing the Use of Biotinylated Probes in Colony Hybridization *Michael J. Haas and Deborah J. Fleming* 239

Affinity Chromatography of Naturally Occurring Folate Derivatives
Jacob Selhub, Beatrice Darcy-Vrillon, and David Fell 247

A Colorimetric Procedure for Measuring β-Lactamase Activity
Menashi A. Cohenford, John Abraham, and Antone A. Medeiros 252

Iodination of Peptidyl Chloromethyl Ketones for Protease Affinity Labels
P. Rauber, P. Wikstrom, and E. Shaw 259

A Discontinuous and Highly Porous Sodium Dodecyl Sulfate–Polyacrylamide Slab Gel System of High Resolution *J.-P. Doucet and J.-M. Trifaró* 265

A Fluorometric Assay for Peptidyl α-Amidation Activity Using High-Performance Liquid Chromatography
Barry N. Jones, Paul P. Tamburini, Angelo P. Consalvo, Stanley D. Young, Susan J. Lovato, James P. Gilligan, Arco Y. Jeng, and Lawrence P. Wennogle 272

An 8- to 10-Fold Enhancement in Sensitivity for Quantitation of Proteins by Modified Application of Colloidal Gold *Thomas Ciesiolka and Hans-Joachim Gabius* 280

A Heterologous Enzyme Immunoassay of Prostaglandin E_2 Using a Stable Enzyme-Labeled Hapten Mimic
Fumiaki Shono, Kazushige Yokota, Kazumi Horie, Shozo Yamamoto, Kouwa Yamashita, Keiko Watanabe, and Hiroshi Miyazaki 284

Extending the Detection Limit of Solid-Phase Electrochemical Enzyme Immunoassay to the Attomole Level
Sarah H. Jenkins, William R. Heineman, and H. Brian Halsall 292

Rapid Isolation of Plasmalemma from Cultured A431 Cells: Characterization of Epidermal Growth Factor Receptors
Peter H. Lin, Richard H. Selinfreund, Eric Wakshull, and Walker Wharton 300

The Use of Sulfosuccinimidyl-2-(*p*-azidosalicylamido)-1,3′-dithiopropionate as a Crosslinking Reagent to Identify Cell Surface Receptors
Enid G. Shephard, Frederick C. de Beer, Claus von Holt, and Janet P. Hapgood 306

Manual Gas-Phase Isothiocyanate Degradation
Wolf F. Brandt and Gerhard Frank 314

A Simple and Efficient Procedure for the Isolation of High-Quality Phage λ DNA Using a DEAE-Cellulose Column
K. J. Reddy, T. Kuwabara, and L. A. Sherman 324

Separation of Human Salivary α-Amylase Isozymes by High-Performance Liquid Chromatography with a Continuous Monitor System of the Activity
Kaoru Omichi and Tokuji Ikenaka 332

Kinetics of Vanadate Dissociation: Estimation of the Rate by Inhibitor Inactivation
Charlotte K. Omoto and Michael E. Moody 337
An Automated Method for Rapid Determination of Diffusion Coefficients via Measurements of Boundary Spreading
Nobuhiro Muramatsu and Allen P. Minton 345
Densitometric Assay of Nanogram Quantities of Proteoglycans Precipitated on Nitrocellulose Membrane with Safranin O *Mikko Lammi and Markku Tammi* 352
Immunological Detection of B-DNA to Z-DNA Transition of Polynucleotides by Immobilization of the DNA Conformation on a Solid Support
T. J. Thomas, Mary Jo Baarsch, and Ronald P. Messner 358
A Quantitative Method for GDP-L-Fuc:*N*-Acetyl-β-D-glucosaminide α1→6Fucosyltransferase Activity with Lectin Affinity Chromatography
Judith A. Voynow, Thomas F. Scanlin, and Mary Catherine Glick 367
Measurement of Total Plasma Cysteamine Using High-Performance Liquid Chromatography with Electrochemical Detection
Lori A. Smolin and Jerry A. Schneider 374
A Radiochemical Assay for a $NADP^+$-Specific γ-Glutamate Semialdehyde Dehydrogenase Extracted from Mitochondrial Membrane of Rat Intestinal Epithelial Cells
James J. Kramer, Rebecca C. Gooding, and Mary Ellen Jones 380
Highly Protective Alkalinization by Ammonia Vapor Diffusion in Viscosimetric DNA Damage Assessment
Rudolf K. Zahn, Gertrud Zahn-Daimler, and Rudolf Beyer 387
Resolution of the Stereoisomers of Leucovorin and 5-Methyltetrahydrofolate by Chiral High-Performance Liquid Chromatography
Kyung E. Choi and Richard L. Schilsky 398
A Stable Colorimetric Assay to Measure Toxin Elevation of Inorganic Phosphate in Bile *Mary Treinen Moslen, Mary F. Kanz, and Ann E. Ferguson* 405
Fibrin Autography of Plasminogen Activator by Electrophoretic Transfer into Fibrin Agar Gels *Georg Brunner and Volker Schirrmacher* 411
Purification of ^{125}I-Labeled Succinyl Cyclic Nucleotide Tyrosine Methyl Esters by High-Performance Liquid Chromatography *Amrat Patel and Joel Linden* 417
Protein Estimation in Tissues Containing High Levels of Lipid: Modifications to Lowry's Method of Protein Determination
Girish C. Upreti, Rosemary A. Ratcliff, and Peter C. Riches 421
The Determination of Recombinant Human Tissue-Type Plasminogen Activator Activity by Turbidimetry Using a Microcentrifugal Analyzer
Ronald H. Carlson, Robert L. Garnick, Andrew J. S. Jones, and Ann M. Meunier 428
Screening of Monoclonal Antibodies Using Antigens Labeled with Acetylcholinesterase: Application to the Peripheral Proteins of Photosystem I
Jacques Grassi, Yveline Frobert, Patricia Lamourette, and Bernard Lagoutte 436
Two Methods That Facilitate Autoradiography of Small ^{32}P-Labeled DNA Fragments following Electrophoresis in Agarose Gels *Peter N. Cockerill* 451
An Assay for the Detection of Superoxide Dismutase in Individual *Escherichia coli* Colonies *Joan R. Schiavone and Hosni M. Hassan* 455
A Single-Photon Imaging System for the Simultaneous Quantitation of Luminescent Emissions from Multiple Samples
F. E. Maly, A. Urwyler, H. P. Rolli, C. A. Dahinden, and A. L. de Weck 462

Western Blotting Assay of Transketolase Concentration in Human Hemolysates
Tohoru Takeuchi, Eun Hee Jung, Kohsuke Nishino, and Yoshinori Itokawa 470

BOOK REVIEW

Advanced Methods in Protein Microsequence Analysis, Edited by Brigitte Wittmann-Liebold, Johann Salnikow, and Volker A. Erdmann

AUTHOR INDEX FOR VOLUME 168 477

The Subject Index for Volume 168 will appear in the December 1988 issue as part of a cumulative index for the year 1988.

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods and methodology of interest to the biological sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

— Cell biology and cell, tissue, and organ culture methods that are of general application.

— Membranes and membrane proteins. These methods form a major section of interest.

— Procedures of interest in the field of molecular genetics including those necessary for cloning, sequencing, and synthesis of nucleic acids and for mutagenesis.

— Purification of enzymes and other proteins, but only if the methods are both novel and applicable generally, i.e., the interest is in a means of purification rather than in the protein that is being purified.

— Immunological techniques both analytical and preparative, if they are of general applicability by biochemists. Immunoassays are included but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

— Pharmacological and toxicological research techniques that offer a biochemical approach.

— Review articles dealing with timely topics. Although these are generally invited, unsolicited outlines or manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to *Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101. In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Information for Authors is published in each July issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 55 letters and spaces), an abstract (250 words), and the address to which proof should be mailed. In creating a title for your paper, please omit words such as *novel*, *rapid*, *improved*, *simple*, *sensitive*, *efficient*, *convenient*, *new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? Abbreviations should not be used in the article title or running title.

Please number all pages of the manuscript.

Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers. (Please see the Appendix at the end of the extended Instructions to Authors published in the July 1, 1986 issue for a list of recommended key words.) These words will also be used in the preparation of the annual cumulative subject index for the journal.

Text. The suggested organization of an article is: abstract; introductory statement; Materials and Methods; Results; Discussion; Acknowledgments; References. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be

described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for photoreproduction. A convenient size for drawings is $8\frac{1}{2} \times 11$ in. (21×27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum. All photographs should be submitted as single glossy prints with strong contrasts and not mounted on cardboard; the magnification should be indicated by a scale where possible. **Simple histograms should be avoided. A table or a paragraph in the text is preferred.**

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. Each table should have a short explanatory title.

Authors may wish to submit complex tables as camera-ready copy. In this way, they are spared tedious proofreading and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single-spaced whenever possible, and preferably submitted as 5×7-in. glossy prints.

Footnotes should be designated in text by superscript numbers and typed on a separate sheet. Footnotes to tables should be identified with lowercase italic superscript letters and placed at the bottom of the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index,* 1985. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jackson, G. E. D., and Young, N. M. (1987) *Anal. Biochem.* **162,** 251–256.
2. Bovey, F. A., and Jelinski, L. W. (1983) Chain Structure and Conformation of Macromolecules, p. 150, Academic Press, New York.
3. Britton, G. (1985) *in* Methods in Enzymology (Law, J. H., and Rilling, H. C., Eds.), Vol. 111, pp. 113–149, Academic Press, Orlando, FL.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
